

## Securing Retailers with RISCO Group

**Retailers face many challenges including protecting their staff, customers and inventory while maintaining a safe and secure environment. At every stage of the retail process, high security measures and detailed procedures are required to protect the inventory from theft, loss and damage.**

Retail companies characterize a multi-site architecture composed of headquarters, stores in different locations and on-site as well as off-site storage rooms. The shop floor accommodates vast numbers of customers and employees on a daily basis as well as frequently hosting external vendors, all of whom have varying access privileges within the retail establishment.

### Retail at a Glance

- Numerous store locations (multi-site architecture)
- Differing access permissions required for staff / external vendors
- Powerful security systems needed to protect inventory both on the shop floor and in stockrooms
- Manpower continuously moved between different locations
- Different security solutions required at stores, storage rooms and warehouses

# RISCO Group's Security Management Solution for the Retail Sector

RISCO Group brings its three decades of expertise and experience to provide a complete and customized Security Management Solution (SMS) that addresses all of the specific demands of the retail sector:

## HQ and Stores:

- The SynopSYS Integrated Security & Building Management™ platform integrates intrusion detection, video monitoring, access control, fire detection, HVAC and building management into a single interface using intuitive synoptic maps. The simple to use interface can be administered either on or off-site by a single security officer in a control room or remote monitoring station. Using the network/ internet, any number of sites and events can be viewed and managed simultaneously by the security officer enabling him to be in multiple sites at one time.
- The axesplus® cloud-based, scalable access control system is a centrally managed smart and intuitive system, designed for multi-site environments with no limit on the number of doors and easily administered using the SynopSYS Integrated Security & Building Management™ platform. Designed to allow different access rights for individual card holders, axesplus® provides protection against staff/ external vendors/ customers entering non-authorized areas. In addition, the cloud-based system enables one access control system to be used for all stores/ offices/ storerooms associated with the retail chain.
- The ProSYS™ and LightSYS™ intrusion detection systems, ideal for multi-site environments, can be installed using the RISCO Bus, enabling remote maintenance, diagnostics and control capabilities while providing the highest levels of protection against intruders.
- RISCO Group's wide range of detectors and sounders can be employed in retail stores/ offices for detecting/ alerting threat. RISCO's Wireless Barrier Beams and WatchOUT™ DT detectors provide outdoor perimeter protection to stores and offices, protecting against intruder attempts.

## Retail Storage and Logistics Centers

- RISCO Group's Industrial LuNAR™ ceiling-mount detector is designed for commercial storage facilities.
- RISCO Group's Seismic Detector provides 24-hour protection of vaults, safes, reinforced concrete walls and doors. Its advanced technologies detect all known types of violent intruder attempts using sledge hammers, Diamond Head drills, explosives, hydraulic pressure tools and thermal tools.

The SMS can be tailor-made according to the specific requirements of the retail chain.

## Simple and Flexible Project Implementation

SynopSYS Integrated Security & Building Management™ includes a flexible integrator toolbox for building professional synoptic maps with clear icons and interactive buttons. These maps reflect the managed site precisely and allow full and immediate reaction to events.

Device state logic and behavior (icon color, size, button appearance, etc) can be easily customized. This allows full flexibility in tailoring a solution to requirements that may arise according to the specific needs of the project, without the need to approach the vendor for special software development and adaptation. The system integrator can define on-site unique behaviors and scenarios according to security officer requests, shortening the implementation time of the project.

### RISCO Group's Added Value

- SynopSYS Integrated Security & Building Management™ is an easy to use, centrally managed platform that employs a single interface to control all security-related systems.
- axesplus® provides cloud-based access control with no limit on the number of doors or card holders, and no necessity for local IT presence.
- RISCO Bus installation of intrusion systems reduces installation costs and supports remote maintenance, diagnostics and control.
- RISCO Group offers a wide range of detectors and sounders that are designed for different environments and offer advanced technologies that significantly increase catch performance while reducing the risk of false alarms.

### The Security Management Solution

RISCO Group showcases its three decades of experience in security products in a powerful and customizable Security Management Solution designed specifically for campuses, multi-site and remote site infrastructures.

The solution incorporates a first-class command and control Security & Building Management platform with the cloud based axesplus® access control system, and integrates RISCO's high end intrusion systems. RISCO's solution also supports seamless integration with diverse third party sub-systems to ensure that all security needs are fully covered.

RISCO Group's Security Management Solution guarantees the highest levels of security in an easy to use, centralized package.
