

## Safeguarding Banks with RISCO Group

**The banking/ financial sector demands the tightest security measures to safeguard its buildings, assets and employees against all potential threats and risks.**

Banks typify a multi-site architecture composed of headquarters, multiple branches, safes/ vaults, outlying ATMs and data centers requiring 24/7 security. Banks also serve a high volume of employees and clients with varying access permissions to distinct zones and at different times of the day.

### Banking at a Glance

- Highly sensitive market demanding the highest security standards
- Comprised of multiple branches/ sites
- Differing access permissions for employees at different levels
- Solution needed for protecting remote ATMs, 24/7
- Vaults / safes require special protection against theft/ sabotage

# RISCO Group's Security Management Solution for the Financial Sector

**With over three decades of experience, RISCO Group is uniquely positioned to provide a complete and customized Security Management Solution (SMS) for banks and the financial sector.**

## HQ and Branches:

The SynopSYS Integrated Security & Building Management™ platform integrates intrusion detection, video monitoring, access control, fire detection, HVAC and building management into a single interface using intuitive synoptic maps. The simple to use interface can be administered either on or off-site by a single security officer in a control room or remote monitoring station.

The axesplus® cloud-based, scalable access control system, is a centrally managed smart and intuitive system, designed for multi-site environments with no limit on the number of doors, and easily administered using the SynopSYS Integrated Security & Building Management™ platform. Designed to allow different access rights for individual card holders, axesplus® provides protection against employees/ guests/ clients entering non-authorized areas. In addition, the cloud-based system translates into huge savings in IT and equipment costs.

The ProSYS™ intrusion detection system can be installed using the RISCO Bus, enabling remote maintenance, diagnostics and control capabilities while providing the highest levels of protection against intruders.

RISCO Group's wide range of Grade 3 detectors and sounders can be employed in the various sites for detection against all types of threat, for example the seismic detector detects all types of violent attempts against safes and vaults. RISCO Group produces a wide range of security accessories using cutting-edge security technologies that minimizes the risk of false alarms.

## Self Banking & ATM's

LightSYS™ intrusion detection can be used for securing ATMs 24/7, providing the highest levels of security against intrusion attempts.

RISCO Group's seismic detector provides 24-hour protection of vaults, safes, ATMs, reinforced concrete walls and doors. Its advanced technologies detect all known types of violent intruder attempts using sledge hammers, diamond head drills, explosives, hydraulic pressure tools and thermal tools.

**The SMS can be tailor-made according to the specific requirements of the bank/ financial organization.**

## Simple and Flexible Project Implementation

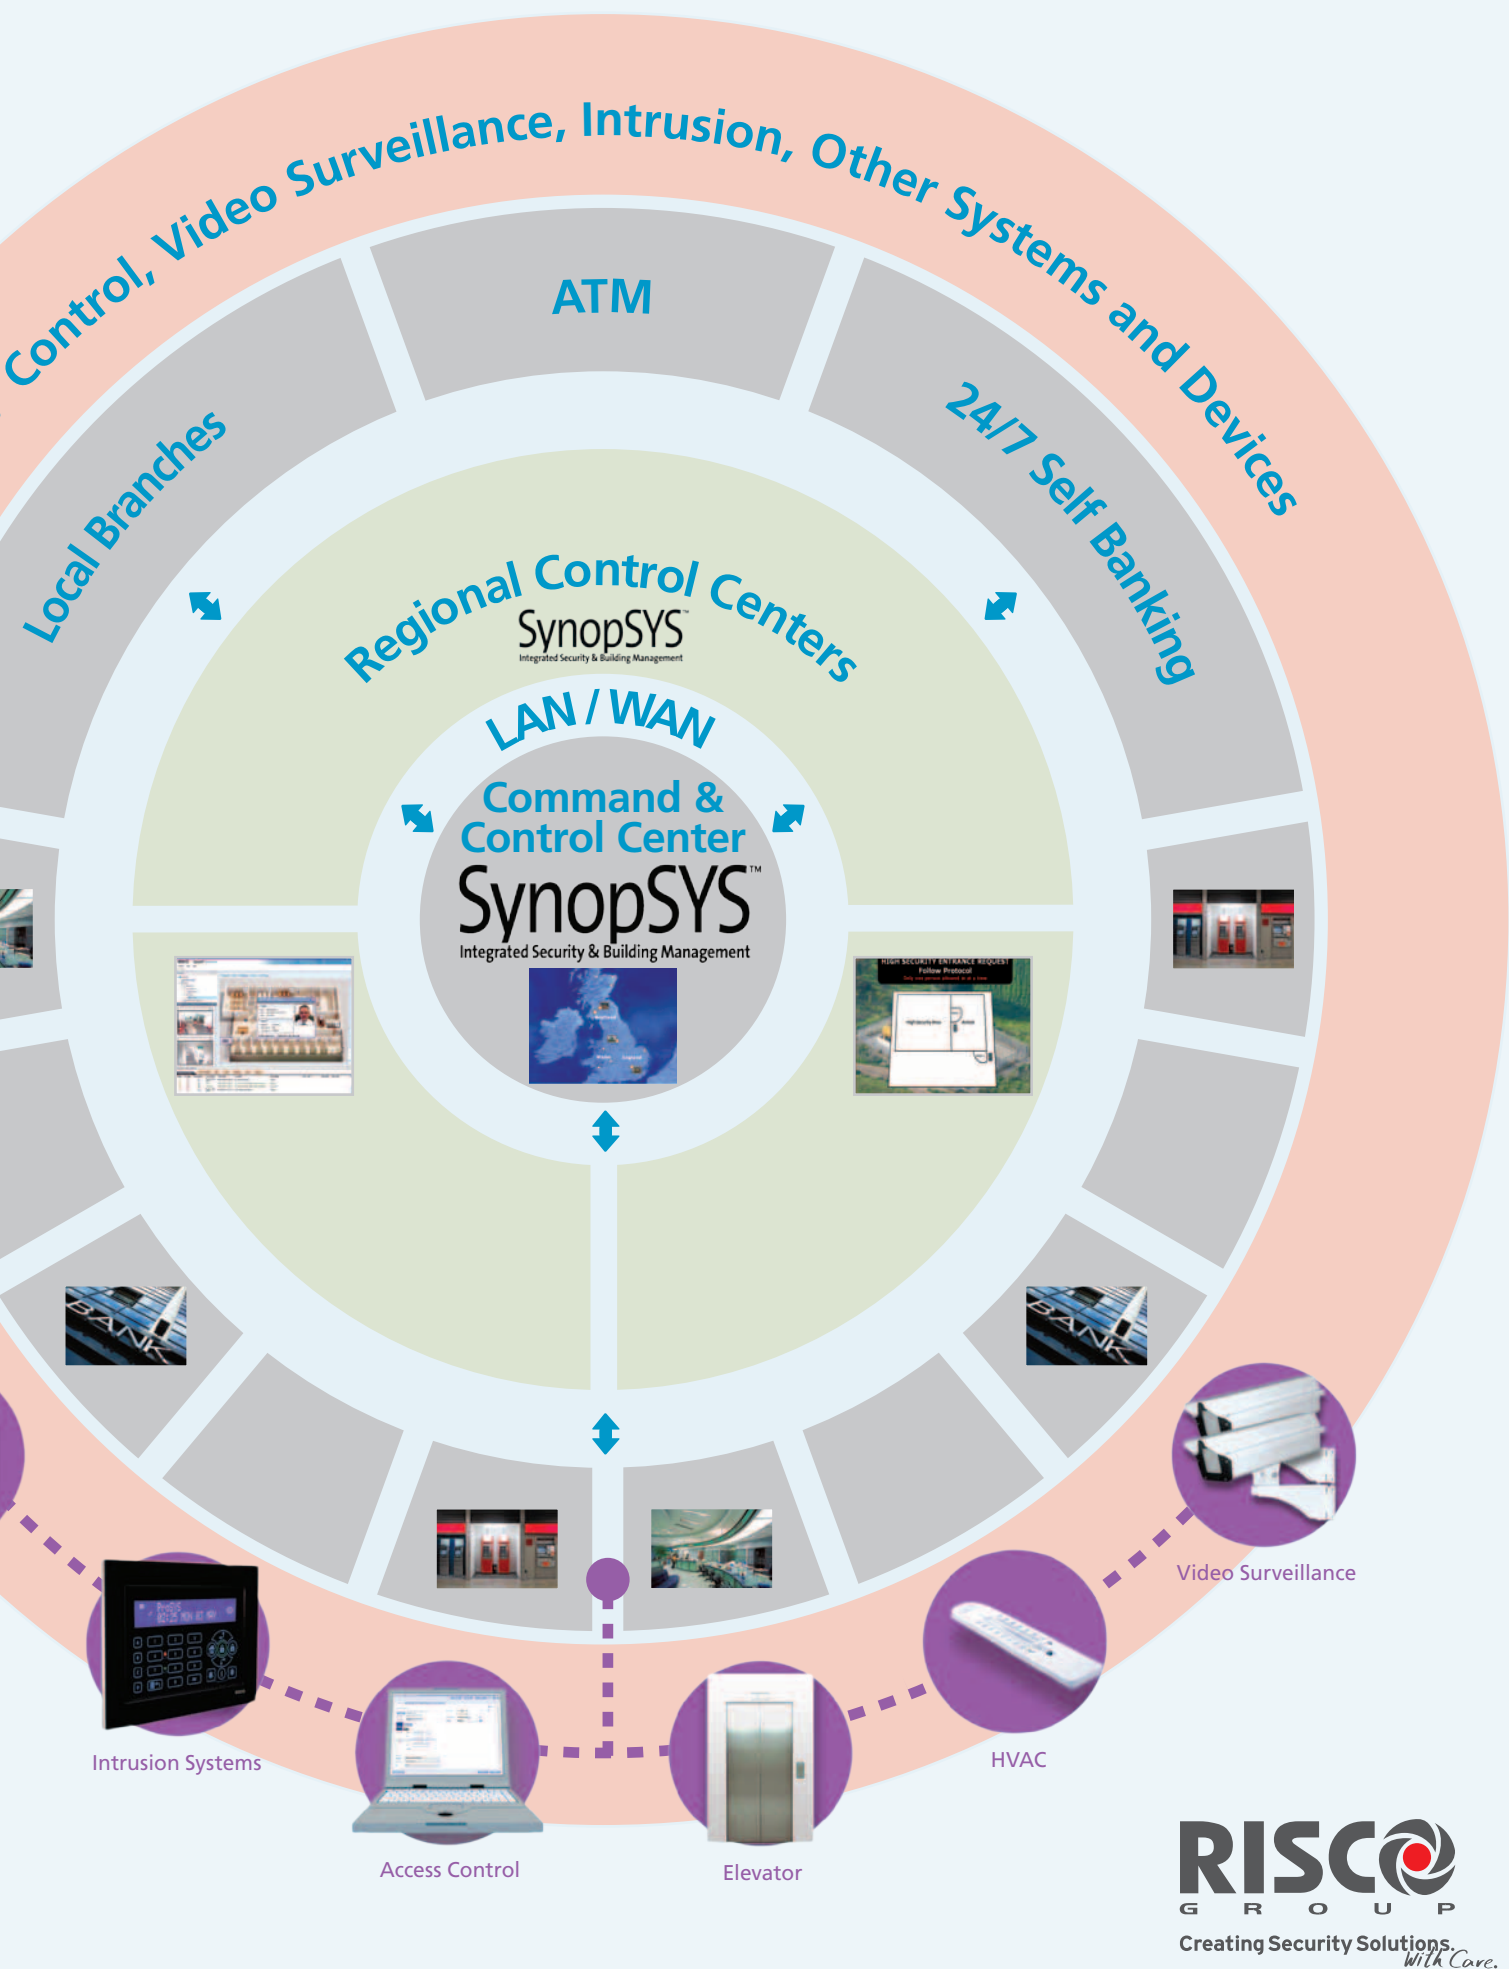

SynopSYS Integrated Security & Building Management™ includes a flexible integrator toolbox for building professional synoptic maps with clear icons and interactive buttons. These maps reflect the managed site precisely and allow full and immediate reaction to events.

Device state logic and behavior (icon color, size, button appearance, etc) can be easily customized. This allows full flexibility in tailoring a solution to requirements that may arise according to the specific needs of the project, without the need to approach the vendor for special software development and adaptation. The system integrator can define on-site unique behaviors and scenarios according to security officer requests, shortening the implementation time of the project.

Fire Safety

### RISCO Group's Added Value

- SynopSYS Integrated Security & Building Management™ is an easy to use, centrally managed platform that employs a single interface to control all security-related systems, and can be administered from a remote location
- axesplus® provides cloud-based access control with no limit on the number of doors or card holders, and allowing unlimited utility sites in remote locations to be administered using one single access control system
- RISCO Bus installation of intrusion systems reduces installation costs and supports remote maintenance, diagnostics and control
- RISCO Group's wide range of industrial strength Grade 3 detectors offer advanced technologies designed for harsh environments and with IP 65 environment rating
- The SMS saves on deployment, ongoing costs and manpower

### The Security Management Solution

RISCO Group showcases its three decades of experience in security products in a powerful and customizable Security Management Solution designed specifically for campuses, multi-site and remote site infrastructures.

The solution incorporates a first-class command and control Security & Building Management platform with the cloud based axesplus® access control system, and integrates RISCO's high end intrusion systems. RISCO's solution also supports seamless integration with diverse third party sub-systems to ensure that all security needs are fully covered.

RISCO Group's Security Management Solution guarantees the highest levels of security in an easy to use, centralized package.
