RISCO Group's Added Value

- SynopSYS Integrated Security & Building Management™ is an easy to use, centrally managed platform that employs a single interface to control all security-related systems

- axesplus® provides cloud-based access control with no limit on the number of doors or card holders, and no necessity for local IT presence

- RISCO Bus installation of intrusion systems reduces installation costs and supports remote maintenance, diagnostics and control

- RISCO Group offers a wide range of detectors and sounders that are designed for different environments and offer advanced technologies that significantly increase catch performance while reducing the risk of false alarms

RISCO's Security Management Solution

RISCO Group showcases its three decades of experience in security products in a powerful and customizable Security Management Solution designed specifically for campuses, multi-site and remote site infrastructures.

The solution incorporates a first-class command and control Security & Building Management platform with the cloud based axesplus® access control system, and integrates RISCO's high end intrusion systems. RISCO's solution also supports seamless integration with diverse third party sub-systems to ensure that all security needs are fully covered.

RISCO Group's Security Management Solution guarantees the highest levels of security in an easy to use, centralized package.

Strengthening Healthcare Security
with RISCO Group

Hospitals and clinics are typically public buildings divided between multiple sites and with a large number of doors accommodating the high volume of staff, patients and visitors passing through on a daily basis.

Healthcare organizations demand first-class security systems as well as tight security procedures to protect their buildings, equipment, staff and patients in addition to sensitive information and medicines, against all potential threats and risks.

Healthcare at a Glance

- Associated clinics/ hospital buildings in different locations (campus based or multi-site architecture)

- Differing access permissions for staff at different levels and locations

- Public and restricted areas require advanced security systems

- Safe and secure environment for welfare of patients and staff is essential

- Expensive equipment and highly sensitive materials (narcotics) must be protected

- A distinction between public areas (waiting rooms, wards, corridors, parking) and restricted areas (operation rooms, laboratories, storage rooms) is required

RISCO Group's Security Management Solution for Healthcare

RISCO Group brings its three decades of expertise and experience to provide a complete and customized Security Management Solution (SMS) that addresses all of the specific demands of the healthcare sector.

Hospitals and Clinics

The SynopSYS Integrated Security & Building Management™ platform integrates intrusion detection, video monitoring, access control, fire detection, HVAC and building management into a single interface using intuitive synoptic maps. The simple to use and centrally managed interface also incorporates and enforces procedures, enabling better management and immediate reaction to any security breach. SynopSYS Integrated Security & Building Management™ can be administered either on or off-site by a single security officer in a control room or remote monitoring station.

The axesplus® cloud-based, scalable access control system, is a centrally managed smart and intuitive system, designed for multi-site environments with no limit on the number of doors, and easily administered using the SynopSYS Integrated Security & Building Management™ platform. Designed to allow different access rights for individual card holders, axesplus® provides protection against entry to non-authorized areas. In addition, the cloud-based system translates into huge savings in IT and equipment costs.

The ProSYS™ and LightSYS™ intrusion detection systems can be installed using the RISCO Bus, enabling remote maintenance, diagnostics and control capabilities while providing the highest levels of protection against intruders.

RISCO Group's wide range of detectors and sounders can be employed in different areas of the clinic/ hospital to protect against all types of threat. RISCO Group produces a wide range of security accessories using cutting-edge security technologies that minimizes the risk of false alarms.

Restricted Areas

RISCO Group's Seismic Detector provides 24-hour protection of vaults, safes, reinforced concrete walls and doors, and can employed to protect against all types of violent attempts to access dangerous drugs. Its advanced technologies detect all known types of violent intruder attempts using sledge hammers, diamond head drills, explosives, hydraulic pressure tools and thermal tools.

The Industrial LuNAR™ ceiling-mount detector is designed for commercial storage facilities.

The SMS can be tailor-made according to the specific requirements of the healthcare facility.

Simple and Flexible Project Implementation

SynopSYS Integrated Security & Building Management™ includes a flexible integrator toolbox for building professional synoptic maps with clear icons and interactive buttons. These maps reflect the managed site precisely and allow full and immediate reaction to events.

Device state logic and behavior (icon color, size, button appearance, etc) can be easily customized. This allows full flexibility in tailoring a solution to requirements that may arise according to the specific needs of the project, without the need to approach the vendor for special software development and adaptation. The system integrator can define on-site unique behaviors and scenarios according to security officer requests, shorting the implementation time of the project.
